CERTIFICATION BUSINESS SOLUTIONS

## ExamStudio Data Center Security

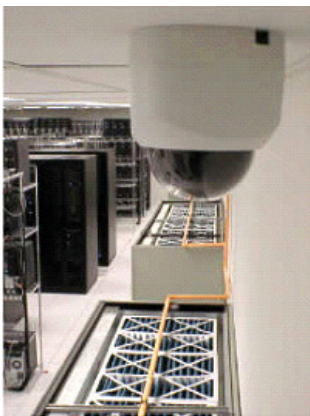

We take security very seriously. Items are an expensive asset of any certification organization. Our secure servers are located in a secure data vault located in Louisville, Kentucky with a mirror site in Chicago, Illinois. Our high-speed servers come with raid 1 redundancy and daily backups.

Additional security items include:

- **A locked and secured facility with 24/7 surveillance video retrieval for one year at any time.**
- **Network and Security**
  - Complete bandwidth redundancy via multiple OC-48 peering partners
  - Complete network device redundancy providing multiple network paths to any destination
  - Enterprise Class routers and switches provide state-of-the-art scalability and management features
  - Enterprise Class Firewalls, Intrusion Protection Systems, and Anti-Virus protect the Four Tier network and our servers
  - State-of-the-art physical security including biometric identity verification, zoned access, and monitoring
  - Complete data center systems redundancy including zoned cooling, power, and fire suppression systems

## Physical Security

The Atvantus data center floor utilizes the latest VESDA smoke detection and FE-25 clean agent fire suppression for uninterrupted operation of non-affected equipment in the event of a fire.

All off-site data storage is maintained in a specialty built Fire King DS-Series data safe, utilizing electronic and mechanical locking mechanisms.

Biometric and employee specific pass codes are required to pass through all security checkpoints.

All internal and external entry points utilize reinforced steel doors and door frames, safety glass, and walls. These access points are video recorded and archived for one year.

The facility is wired with glass break sensors and visual and audible alarms to alert staff in the event of an external glass break.
